

REFERENCE LETTER FOR H2O MARINE ANTI-FOULING SOLUTIONS

While developing ,E' - our 60ft Sunreef supercat - sustainability was one of our main goals.

Making our choices we looked for the most environmentally friendly and responsible solutions.

To protect our hull from fouling we needed an alternative to poisonous anti-fouling paints.

H2O Marine offered us a combined solution of a hard fouling release coating (FRC) and an Ultrasonic anti fouling system (UAF).

The coating is super smooth and very easy to clean, and thanks to its smooth surface the resistance trough the water is a lot less than with traditional anti fouling paints. It gives us some extra speed while sailing. UAF prevents hard fouling like barnacles and mussels from adhering to the hull as a result of ultrasonic vibrations.

We can recommend the solutions from H2O Marine as an environmentally friendly and performance-enhancing alternative to poisonous anti fouling paints.
